

Parameter	Rating	Units
Blocking Voltage	60	V _P
Load Current	±6	A _{DC}
On-Resistance	0.06	Ω

Features

- Load Current Up to ±6A_{DC} or 6A_{rms}
- 5000V_{rms} Input/Output Isolation
- Power SOIC Package
- 12.5mm External Creepage Distance with Appropriate Layout
- High Reliability
- Low Drive Power Requirements
- Arc-Free With No Snubbing Circuits
- No EMI/RFI Generation
- Flammability Rating UL 94 V-0

Applications

- Industrial Controls
- Security: Door Latches, Solenoids, Annunciators
- Motor Control
- Heating, Ventilation, and Air Conditioning Control (HVAC)
- Robotics
- Starter Ignition Circuits
- Medical Equipment—Patient/Equipment Isolation
- Instrumentation
- Multiplexers
- Electronic Switching
- I/O Subsystems
- Home Appliances
- DC Power Supplies
- Aerospace

Description

The CPC1907B is a single-pole, normally open (1-Form-A) solid state relay that employs optically coupled MOSFET technology to provide 5000V_{rms} of input to output isolation.

Switching of the efficient MOSFET switches is controlled by the photovoltaic die using the patented OptoMOS architecture while activation of the output is controlled by a highly efficient infrared LED. The combination of low on-resistance and high load current handling capabilities makes the relay suitable for a variety of high-performance switching applications.

Approvals

- UL 508 Certified Component: File E69938
- CSA Industrial Control Switches Approval: Pending

Ordering Information

Part #	Description
CPC1907B	8-Pin Power SOIC Package (25 per tube)

Pin Configuration

Switching Characteristics of Normally Open Devices

Absolute Maximum Ratings @ 25°C (Unless Otherwise Noted)

Parameter	Ratings	Units
Blocking Voltage	60	V
Reverse Input Voltage	5	V
Input control Current	50	mA
Peak (10ms)	1	A
Input Power Dissipation ¹	150	mW
Total Power Dissipation ²	2400	mW
Isolation Voltage, Input to Output (60 Seconds Maximum)	5000	V _{rms}
ESD, Human Body Model	8	kV
Operational Temperature	-40 to +85	°C
Storage Temperature	-40 to +125	°C

¹ Derate linearly 1.33mW / °C

² Derate linearly 20mW / °C

Absolute Maximum Ratings are stress ratings. Stresses in excess of these ratings can cause permanent damage to the device. Functional operation of the device at conditions beyond those indicated in the operational sections of this data sheet is not implied.

Typical values are characteristic of the device at +25°C, and are the result of engineering evaluations. They are provided for information purposes only, and are not part of the manufacturing testing requirements.

Electrical Characteristics @ 25°C (Unless Otherwise Noted)

Parameter	Conditions	Symbol	Min	Typ	Max	Units
Output Characteristics						
Load Current, Continuous	free air	I _L	-	-	6	±A _{DC} , A _{rms}
Peak Load Current	t = 10ms	I _{LPK}	-	-	20	±A _P
On-Resistance ¹	I _L =1A	R _{ON}	-	-	0.06	Ω
Off-State Leakage Current	V _L =60V _P	I _{LEAK}	-	-	1	μA
Switching Speeds	I _F =5mA, I _L =100mA (See Timing Diagram)	t _{on}	-	2.7	5	ms
Turn-On		t _{off}	-	0.14	1	
Turn-Off						
Output Capacitance	I _F =0mA, V _L =50V, f=1MHz	C _{OUT}	-	340	-	pF
Input Characteristics						
LED Current to Activate ²	I _L =1A	I _F	-	1.5	5	mA
LED Current to Deactivate	-	I _F	0.6	-	-	mA
Input Voltage Drop	I _F =5mA	V _F	0.9	1.2	1.5	V
Reverse Input Current	V _R =5V	I _R	-	-	10	μA
Input/Output Characteristics						
Capacitance, Input/Output	V _{IO} =0V, f=1MHz	C _{IO}	-	2	-	pF

¹ Measurement taken within 1 second of on-time.

² For high temperature operation (T_A>60°C), a minimum LED drive current of 10mA is recommended.

Manufacturing Information

Moisture Sensitivity

All plastic encapsulated semiconductor packages are susceptible to moisture ingress. IXYS Integrated Circuits classifies its plastic encapsulated devices for moisture sensitivity according to the latest version of the joint industry standard, **IPC/JEDEC J-STD-020**, in force at the time of product evaluation. We test all of our products to the maximum conditions set forth in the standard, and guarantee proper operation of our devices when handled according to the limitations and information in that standard as well as to any limitations set forth in the information or standards referenced below.

Failure to adhere to the warnings or limitations as established by the listed specifications could result in reduced product performance, reduction of operable life, and/or reduction of overall reliability.

This product carries a Moisture Sensitivity Level (MSL) classification as shown below, and should be handled according to the requirements of the latest version of the joint industry standard **IPC/JEDEC J-STD-033**.

Device	Moisture Sensitivity Level (MSL) Classification
CPC1907B	MSL 1

ESD Sensitivity

This product is **ESD Sensitive**, and should be handled according to the industry standard **JESD-625**.

Soldering Profile

Provided in the table below is the Classification Temperature (T_C) of this product and the maximum dwell time the body temperature of this device may be ($T_C - 5$)°C or greater. The classification temperature sets the Maximum Body Temperature allowed for this device during lead-free reflow processes. For through-hole devices, and any other processes, the guidelines of **J-STD-020** must be observed.

Device	Classification Temperature (T_C)	Dwell Time (t_p)	Max Reflow Cycles
CPC1907B	245°C	30 seconds	3

Board Wash

IXYS Integrated Circuits recommends the use of no-clean flux formulations. Board washing to reduce or remove flux residue following the solder reflow process is acceptable provided proper precautions are taken to prevent damage to the device. These precautions include, but are not limited to: using a low pressure wash and providing a follow up bake cycle sufficient to remove any moisture trapped within the device due to the washing process. Due to the variability of the wash parameters used to clean the board, determination of the bake temperature and duration necessary to remove the moisture trapped within the package is the responsibility of the user (assembler). Cleaning or drying methods that employ ultrasonic energy may damage the device and should not be used. Additionally, the device must not be exposed to flux or solvents that are Chlorine- or Fluorine-based.
